Where Trust is Built™

DETEX®

Integrated Door Security Systems

Now in a Detex EasyKit – the integrated door security system you need for access and egress control.

EasyKit®

EXIT

Access Control

Egress Control

**PUSH UNTIL ALARM SOUNDS
DOOR CAN BE OPENED IN 15 SECONDS**

With our new EasyKits, you can order configurable egress and / or access control door security systems more easily than ever before. From delayed egress to automatically operated doors, your door security needs can now be ordered with a single number that specifies exactly what you'll require to get the job done.

Easy really means easy

You get five easy “pieces” that are part of the whole EasyKit concept of providing you with a hassle-free way to set up an integrated door security system that has the reliable you’ve always counted on in Detex products.

Easy to specify

- Packaged so that everything you need (hardware, documentation, wiring, etc.) is specified by one easy and intuitive catalog number
- Kitted to accommodate virtually every door security application for egress and access control
- Plug-and-play capability with other manufacturers’ hardware and access control systems

Easy to order

- You don’t have to remember the details because EasyKits come with everything you need
- Simple, configurable catalog numbers make ordering and re-ordering easy

Easy to install

- Detex panic hardware is the easiest to install in the industry. Patented strike locator; easy, template-free installation
- Wide variety of electric options further simplifies installation by eliminating components required by other manufacturers
- Easy, clear documentation covers all aspects of the systems from installation, integration, use and maintenance standpoints
- Supported by Detex-trained and certified installation experts worldwide

Easy to use

- Components and systems are designed and integrated with the customer in mind
- Conforms to all life safety requirements
- No special knowledge required for easy operation

Easy to maintain

- Designed for long life and low maintenance in high-use, high-abuse environments
- Outstanding manufacturer’s warranty and Detex support

Start with the EasyKit that matches your needs and configure it for your application

There are EasyKit systems for the most requested needs, and each can be configured with one order number to include everything necessary for a particular application. A restaurant rear entrance? An airport emergency exit? Outside gates at a garden center? Dormitory entrances? Auditorium doors? Whatever your security system needs to cover, including both egress and access control, there’s an EasyKit solution for you. The EasyKit possibilities are virtually endless, so just create the single order number that includes exactly the equipment you need and let an EasyKit do the rest.

Five primary EasyKits,

EasyKit®

These EasyKits are designed to solve the most common egress and access control door security requirements. Use them as a basis for creating your own EasyKit solution for your particular situation. Even if you don't see your exact application listed, you can still order what you need—our long experience in the business has prepared us for virtually any door security requirement. Remember as well that Detex software and equipment can be easily integrated with other systems you may already have installed, so there's no need to start from scratch if you want to keep your present equipment.

Once you have determined your needs, see our catalog sheets for specific numbers and options, as well as information on creating a complete order number for your EasyKit.

Weatherized Delayed Egress

Doors or gates exposed to the elements call for a weather-protected system.

With our Weatherized Delayed Egress equipment, exit is delayed 15 seconds unless authorized by key or valid access control credentials. Entry is either restricted or allowed by a valid key.

Sample applications:

Any doors requiring high security loss prevention and / or life safety that open to the outside or are in a wet environment

Outside doors or gates requiring high security loss prevention such as garden centers

Outside product display areas

Secured outside areas such as an assisted living facility courtyard

Amusement and theme parks secured outside areas

Delayed Egress or Delayed Egress with Access Control

Order an EasyKit with everything you need to set up delayed egress. Exit is delayed 15 seconds unless authorized by key or valid access control credentials. Entrance is controlled by valid key or access control credentials (proximity card, biometric reader, keypad or combination). For high security applications, tailgate detection can be added to the system, ensuring authorized entry for only one person.

Sample applications:

Any door that requires a controlled access and a delayed egress function

Retail, restaurant and commercial back-door high security loss prevention applications

Airport emergency exit to secured area

Jetway doors

Airport baggage area entrances

Assisted living secured exits

Special care facilities secured exits

Government secured exits

Courthouse secured exits

Museum secured exits

countless applications

Automatically Operated Doors

When entry is strictly limited to authorized personnel, this EasyKit will provide the stringent security required. After authorized personnel present the proper access control credentials, the exit device unlocks and subsequently the door operator opens the door(s) automatically to allow entry or exit.

For high security applications, tailgate detection can be added to this application allowing only one person to pass through the opening after access is granted.

Sample applications:

- Controlled entrances to restricted areas that require automatic doors
- Medical doors with ADA requirements
- Manufacturing
- Schools and universities
- Commercials

Electric Dogging with Central Control

Ideal for situations where many doors need to be locked or unlocked easily, this EasyKit system helps you control door security at entry points with heavy traffic.

Authorization by central control key or switch allows either manual or automatic pushpad depressions. The pushpad and the latch bolt remain retracted providing push-pull operation (free access in or out). Relocking is accomplished automatically by the central control key or switch.

Sample applications:

- Any door or groups of doors where free access in or out needs to be easily controlled from a central location
- School lockdown
- Auditorium door function
- Convention centers
- Hotel meeting rooms
- Libraries
- Museums
- Sports complexes
- Schools and universities
- Municipal
- Government

Access Controlled Doors

Whether it's for a PC-managed or stand-alone application, you can tailor this EasyKit to meet your access control requirements. Unrestricted egress is provided by the exit device or, optionally, egress is validated by access control credentials. Entry is authorized by valid access control credentials.

For high security applications, tailgate detection can be added to this application allowing only one person to pass through the opening after access is granted.

Sample applications:

- Any entry door where controlled or restricted entrance or exit is required
- Applications that require a retrofit solution without additional labor and cost of adding an electric strike
- Authorized employee only doors
- Dormitory entrances
- Doors to restricted areas
- Multi-family housing (condominiums, apartment complexes)
- Courthouses

Why choose a Detex EasyKit for your integrated door security system?

With forty years of experience in the field, Detex has built a reputation as the quality choice. Well-engineered, well-built and rugged on the job, Detex components stand up to the rigors of constant use. But it pays to be good-looking as well, because architects and customers prefer Detex for security components that complement building style and décor.

Our wide variety of best-in-class egress and access control products includes door area control products such as turnstiles and tailgate detection systems. Area control products are manufactured by Designed Security Incorporated (DSI - dsigo.com), a Detex company.

Detex promises excellence in customer service, with full support for ordering, installation and maintenance of our products. That's why you can be sure that your Detex EasyKit for egress and/or access control will meet your expectations for ease of installation and reliable, trouble-free service in an integrated door security system.

Trust Detex to do it right.
